for challenging **Idle Air Control Valve**
applications

SONCEBOZ
from mind to motion

Challenges in Idle Air Control Valve

On internal combustion engines, idle air control is achieved by regulating the air intake from the ECU according to the engines charge variations. Precise control requires linear actuators that move a needle valve that blocks the bypass canal for the main butterfly valve. For example, during a cold start idle air control, thanks to the catalyser, substantially reduces fuel consumption and CO₂ emissions.

The need to implement the latest standards represents a great opportunity for Tier I suppliers who can supply standardized products, such as mechanical throttle bodies that have been installed in many types of vehicles for several years.

Lightweight, efficient and extremely reliable, the Sonceboz linear actuator uses stepper motor technology to satisfy the requirements of various engine types around the world. The actuators are manufactured on automatic production lines that perform tests to ensure that the final product reaches quality levels approaching 0 PPM.

Dates of implementation on-road exhaust emission roadmap, per country

• Passenger Cars

IACVs were first installed in passenger cars approximately 30 years ago. Today a vast number of models, especially those featured with smaller displacement engines, are equipped with this technology.

• Motorcycles

With the introduction of EURO 3 standards, many carburetor models were updated with throttle bodies incorporating a bypass function. This made it possible to achieve fine adjustment of idle air flow, for various small engines.

• JetSkis

The latest automobile technology, combined with dedicated protection systems for marine applications, enable Sonceboz linear actuators to be installed in conditions where perfect salt water tightness is required.

• ATVs (All Terrain Vehicles)

Reduced weight plus simple and robust design allow the 7217 linear actuator to be installed in specific applications like ATVs. Resistance to high vibration levels and the ability to function in harsh environments have made our product a preferred solution for this type of application.

Our solutions

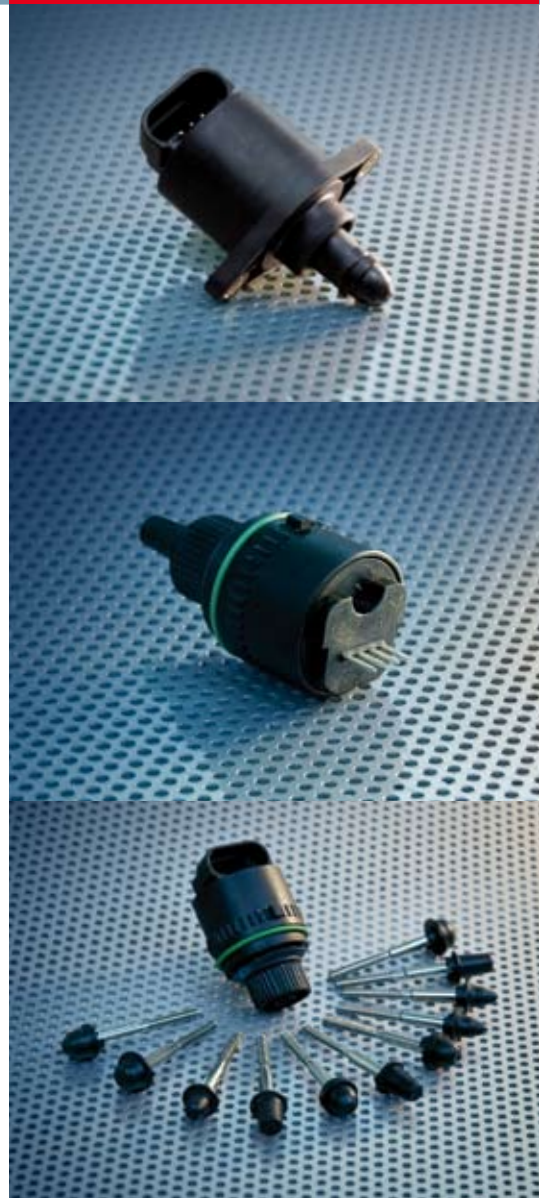

Sonceboz has been recognized for years as an expert in advanced mechatronics drive systems. This has allowed us to gather an in-depth understanding of customer expectations. Our outstanding track record and successful performance, emphasized by the competency and flexibility of our engineering team, create a win-win partnership with our customers.

Our solution is a Digital Linear Actuator (DLA), which is a solid and award winning permanent magnet stepper motor technology. Sonceboz DLAs are one of the most reliable and cost-effective idle air control solution for engines with a capacity of up to 1.6-liters:

- lightweight: 70 g
- force up to 40 N
- speed up to 40 mm/s
- vibrations up to 40 G from 20 to 2000 Hz
- temperature range from -40°C up to +125°C
- IP67 watertight

The 7217 Series linear actuator can be tailored to specific configurations by adapting the shape of the pintle and the housing. Production and assembly lines are fully automatized. Some components are over-molded which allows a greater resistance to vibration.

This 3rd generation of DLAs Series has continually improved over the past thirty years with the emphasis on a zero defect process. Due to the simple and rugged design, Sonceboz DLAs are now installed in millions vehicles worldwide.

...a state-of-the-art expertise proven in many combustion engines worldwide:

Your benefits

- *50% lighter than standard solution*
- *Design for space reduction*
- *Excellent reliability in harsh environments*
- *Outstanding track record*
- *Validated and off-the-shelf solutions*

SONCEBOZ Motion systems

Our core competencies consist of design, development and production of **mechatronic drive systems** and **electric motors** that operate in **harsh environments**. We are committed to improving safety, decreasing energy consumption and minimizing the impact on the environment. Our focus on **innovation, best in class quality** and **exceptional service** is our key to success for worldwide OEM customers and their suppliers.
